Hunger Game

THE GREAT FOOD RESET

by Marc Morano - Publisher of *Climate Depot* - Author of new book coming August 30, 2022 - *The Great Reset: Global Elites and the Permanent Lockdown*.

America's food security is being threatened by the forces of the Great Reset led by the World Economic Forum in Davos and under the thumb of the United Nations "sustainable development" Agenda 2030. "Biden Says to Expect 'Real' Food Shortages Due to Ukraine War," blared a headline from Bloomberg News in 2022. "It's going to be real," Biden asserted. The U.N. estimated that 2.3 billion people are severely or moderately hungry globally.

A food crisis is just the ticket for even more chaos that the WEF can exploit for their Reset agenda. "Over the last decade" China has been "snapping up farmland and purchasing major agribusinesses," according to a 2021 report by Politico. "By the start of 2020, Chinese owners controlled about 192,000 agricultural acres in the U.S., worth \$1.9 billion, including land used for farming, ranching, and forestry, according to the Agriculture Department."

During a House Appropriations Committee hearing, Rep. Dan Newhouse (R-WA) noted that "the current trend in the U.S. is leading us toward the creation of a Chinese-owned agricultural land monopoly."

But don't worry, China has

competition for gobbling up U.S. farmland. The quest for a Chinese land monopoly is being challenged by Bill Gates! Gates's fake-meat agenda could transform American farming. "All rich countries should move to 100% synthetic beef," Gates has urged.

"Farmers [are being] turned into renters" as Gates becomes the "nation's largest farmland owner" by using "a web of at least 22 limited liability shell companies," reported NBC News in 2021. "Young farmers" are "going up against these billionaire investors.... Who can compete with the likes of Bill Gates, right? More and more we are seeing farmers turn into renters," tech reporter April Glaser explained, noting that more farmland could be "gobbled up by an investor class." "Bill Gates isn't the one in overalls," Glaser pointed out.

"He is not the one on the tractor doing the farming. He is the landlord here."

The question looms: China or Bill Gates, who is more of a threat to America?

The World Economic Forum is so eager to promote synthetic "meat" that they are touting numerous ways to print up to 6 kilograms of the fake meat an hour. As part of this new coerced Great Diet Reset, the WEF has been advocating eating bugs to save the planet. The Davos-based group has explained, "Why we might be eating insects soon." World Economic Forum senior writer Sean Fleming explained, "The global market for edible insects could grow to \$1.18 billion by 2023. That's almost triple its current level."

According to Fleming, "Per kilo of live weight, bugs emit less harmful gas than more mainstream farm animals. A cow, for example, produces 2.8 kg of greenhouse gas per kilo of live body weight. Insects, on the other hand, produce just 2 grams," WEF claimed.

Our future is being planned by our overlords, load up on eating bugs to save the planet! It is a future that will happen, only if we allow it.

The *New York Times* is all on a Great Food Reset. The paper praised inflation as a way "to drive welcome change for the planet" by "adjust[ing]

(Continued on page 2)

what we eat to save both our pocketbooks and our planet.” Culture & lifestyle journalist Annaliese Griffin writing in the *New York Times* on June 2, 2022, wrote: “Inflation has the potential to drive welcome change for the planet if Americans think differently about the way they eat.”

“Climate change has motivated some to eat less resource-intensive meat and more vegetables, grains and legumes, but this movement has not reached the scale necessary to bring needed change — yet,” Griffin wrote.

Griffin gushed: “Inflation resulting from the cost of fuel and feed, coupled with supply chain slowdowns, may make meat substitutes more affordable relative to traditional, factory-farmed meats.” She added, “Historically, cost has been a powerful force that has changed Americans’ diets.”

The *New York Times* seems bent on updating Gordon Gekko’s phrase from the 1987 film *Wall Street*: Chaos, for lack of a better word, is GOOD. Climate activists in academia, the Biden administration and the media seem to think the more humans suffer, the more the planet will benefit.

This is more evidence that economic calamity, debt, inflation, supply chain issues, and skyrocketing meat and energy costs are not the unintended consequences of the climate agenda, but the INTENDED consequences. Chaos conditions the public to accept more centralized control of their lives.

Vladimir Lenin reportedly once said, ‘worse is better’ or ‘the worse, the better’ to cheer on chaos and the destruction of the existing order to impose his ideology.

Actor and now anti-Great Reset activist Russell Brand eloquently denounced the forces trying to reset our lives and food by declaring they are trying to destroy ordinary people. “You have to recognize that organic farming is not the desired endpoint,”

Brand explained. “The displacement of the people is the desired end point. The disempowerment of the farmers — the bankruptcy of the farmers, is the desired endpoint,” Brand added.

Make no mistake about it, what we are witnessing globally and in the U.S is a war against modern civilization. The World Economic Forum, the UN, and the World Health Organization seek nothing short of controlling humans.

Sri Lanka’s engaged in a disastrous organic farming experiment that left the nation in revolt and collapse. The farmer revolt in the Netherlands against climate-inspired shut down of family-owned generational farming is spreading globally, including in Canada.

The global institutions pushing this reset on the world believe that we, the unwashed masses, will create inequity, racism, environmental destruction, and a climate crisis — if we are left to our own devices. These global forces literally want to regulate not just our farming but every aspect of our lives.

You are the pollution they want to eliminate!

A 2022 study touted by *Scientific American* claimed “Eating Too Much Protein Makes (Human) Pee a Problem Pollutant in the U.S.” and thus “can contribute to warming.” *Scientific American* explained: “In the U.S., people eat more protein than they need to.” The “urea can break down to form gases of oxidized nitrogen. These gases reach the atmosphere, where nitrous oxide (N₂O) can contribute to warming via the greenhouse effect and nitrogen oxides (NO_x) can cause acid rain,” the magazine explained.

Human urine as the new environmental and climate boogeyman is just the latest scare to get you to stop eating meat. Now when you pee, you are allegedly a human pollution

machine that is heating up the planet. The voiding of your bladder must be curtailed for the sake of the planet! So says ‘The Science’!

The last several years have seen endless emergency declarations, wars, massive government spending, debt, runaway inflation, supply chain issues, increases in crime, food shortages, no privacy from Big Brother-style government and corporate snooping, skyrocketing energy prices that chip away at car and home ownership, threats of climate lockdowns, oppressive censorship, crushing of dissent, and limits on freedom of travel and physical autonomy.

All of this chaos is music to the ears of those who don’t like the messiness of human freedom. The WEF’s vision is to crowd us all into urban areas. They want us to own nothing.

Bedlam is a useful way to collapse the current system and install a Great Reset. It is all part of the plan: destroy the old order and make the population so desperate that you can impose policies that make them weaker and more dependent on the government.

As Bill Gates and BlackRock buy up farmland and single-family homes, driving up food prices and turning more and more citizens into renters, who will realize the root causes of the higher cost of living? Will the public just accept the goal of the Great Reset: “You will own nothing and you will be happy”?

It’s time for the Great Reject. Rise up and defy the Great Reset.

NO FUTURE FOR FARMERS

by Masooma Haq, Joshua Philipp and Roman Balmakov, writers at *The Epoch Times*. Reprinted with Permission from The Epoch Times (theepochtimes.com)

Those familiar with the most recent farmer protests in the Netherlands are saying that the Dutch government's climate nitrogen-reduction policies targeting farmers actually have a nefarious goal. Dutch farmers see it as an effort to seize their land and experts say these climate policies are a part of a global agenda to control the means of food production, that if allowed to play out will end in a global food crisis.

Michael Yon, a journalist who has covered numerous major events and who is currently in the Netherlands covering the farmer protests, told *The Epoch Times* that the Dutch government is not alone in targeting their farmers, many other countries' farmers are also experiencing the same threat.

"The dark cult of Davos [World Economic Forum] is trying to destroy these farmers, and obviously, this has major security consequences, not just for the Netherlands, but for all of Europe and the world," Yon said during a recent interview with Epoch TV's Crossroads program. "They're trying to put these farmers out of business and trying to confiscate their land."

Hundreds of Dutch farmers and many truckers are trying to bring attention to the government's proposed policies which if implemented would effectively handicap the farmers and many would be financially ruined. In an effort to capture the public's attention, the Dutch farmers are blocking roads and infrastructure that distribute their goods, leaving Netherlands' store shelves empty.

"Many people are not tracking, many are and tend to be highly supportive of the farmers, but many are just going about their daily lives just

like Americans and Canadians and others do," Yon said.

"They need to get that wake-up call, like listen, you are going to get hit sooner or later; would you rather have your shelves empty now for just a really short time, or be under the thumb of the beast [World Economic Forum] forever," he said.

'Number Six in Food Exports'

Compared to the United States, the Netherlands is a fraction of the size, but rivals U.S. food production, sitting at number six in food exports. The Dutch farmers are some of the most knowledgeable and most efficient in the world, Yon said.

"These are the best farmers in the world. They are worth more than their farms because you can take them and make great farms anywhere with the knowledge in their hands," he added.

Many countries including the Netherlands, Canada, Germany, and Sri Lanka are following a similar agenda to reduce nitrogen in the environment by at least 30 percent. Many other countries' farmers, including the United States, cannot find enough chemical nitrogen fertilizer to grow their crops.

If the government implements their nitrogen reduction policies, the Dutch farmers say most of them will lose their farms and their livelihoods, as well as create massive food insecurity for their country and the world.

The Dutch farmers are protesting because they have no other way to try to save their farms and food production in the Netherlands, Reindert a 30-year-old dairy farmer told Epoch TV's Facts Matter host Roman Balmakov.

If the government wins this con-

flict, his farm would have to kill off about half of its cows to reduce nitrogen, said Reindert, which would make their business financially unsustainable.

Ultimately, "They just want to remove the farmers from the land," Reindert said.

The larger group of farmers that Balmakov spoke to said the coun-

try's media outlets are taking the side of the government and painting their protest in a bad light and falsely saying the farmers are poisoning the land. The Dutch farmers urged Americans to support their protest and Dutch goods.

Globalist Agenda

Meanwhile, Thierry Baudet, a Dutch parliamentary leader in the opposition party, the Forum for Democracy, said that the Dutch government is following a globalist agenda and agreed their goals are evil.

Baudet believes the current Dutch administration wants to end the Netherlands' means of food production and sovereignty to make the people fully depend on the government.

"The people governing this country are following the script written by the EU to realize what they call a Great Reset. They want to make us more dependent on international supply chains," Baudet said during a recent interview with Epoch TV's Facts Matter program.

The EU's Natura 2000 guidelines, which stipulate that the Netherlands

— (Continued on page 4)

needs to reduce nitrogen in their environment, are outdated and need to be terminated, Baudet added.

The guidelines say that “certain areas in Europe were picked for the preservation of certain forms of vegetation, and as it happens, the Netherlands was picked to protect moss and clover,” said Baudet.

“The real agenda behind that [Natura 2000] is that they want to have a stick to beat the farmers with and it’s not just to facilitate the continuous immigration,” but the broader and “spiritual” agenda is to end the farmers’ connection to their land and traditions, said Baudet.

“The real point here is the Great Reset, mass migration, transnational governance, and that’s why people have to become atomized, they have to lose their connection to the land, and that’s why they’re hitting on the farmers,” he said.

Dutch Media Demonizes Farmers

The Netherlands’ news media, which is loyal to the ruling political party, is maligning the farmers by saying that they are poisoning the land with nitrates and ammonia, Yon said.

Yon likened the demonization of Dutch farmers and the government’s land grab effort to what happened under many totalitarian regimes, including China, Cambodia, and Russia.

Joshua Philipp, an investigative reporter and host of Epoch TV’s “Crossroads” program, said he has found an undeniable large-scale trend toward seizing control of food production around the globe.

“I will say absolutely now definitively that this is an agenda. This is not a natural crisis,” Phillip told his Crossroads audience in a

recent episode.

A recognized expert on unrestricted warfare, asymmetrical hybrid warfare, and expert on Chinese Communist Party subversion, Philipp said his research on the nitrogen reduction policies and chemical fertilizer trends in the majority of countries around the world will lead to food shortages like what happened in Sri Lanka recently.

Philipp called Sri Lanka’s crop failures and food shortages, “the canary in the coal mine,” warning the world about what could end up happening if they don’t change the direction their governments are taking them in terms of nitrogen reduction standards and fertilizer use.

Baudet is not optimistic about the farmers’ impact on stopping this globalist agenda but said there is a chance if there is true solidarity amongst the farmers and they hold out for a few days or weeks and refuse to do any food distribution, then they might be able to wake up the Dutch public and hence change government policies.

“A radical agenda is being pushed, which is called the Sustainable Development Goals, which is all the climate hysteria of which scientifically [is] bonkers,” Baudet said.

The globalists (World Economic Forum) set 2030 as the year to meet their economic goals and take over, but Baudet said that citizens around the world have to work to make sure their agenda is not realized.

If you look at the large picture, “You see this trend towards bureaucratic dictatorship that is being imposed on all of us, and only if we unite and if we surpass all these differences that have divided us for so many years, and we fight this together, can we succeed, and we must do it,” said Baudet.

“It’s the single most existential fight in the history of civilization,” he added. 🦅

No Fertilizer, No Food

by Anne Schlafly Cori, Chairman, Eagle Forum

A Nebraska Eagle Forum member just told me that this year the fertilizer for her farm costs \$1,400 per ton. Last year, the cost was \$350 per ton. She is not sure that her farm will be able to survive. No fertilizer means no food.

The climate alarmists have demonized the production of food. Sri Lanka, with a population of 22 million, is a cautionary tale. These prophets of doom recently destroyed Sri Lanka by imposing a nationwide ban on inorganic fertilizers in June 2021.

Widespread crop failure ensued. It took less than six months for inflation to soar by 50

percent, economic collapse, and social rebellion. No food means no peace.

We have abundant food in America because farmers use fertilizers and pesticides. Crop failure is very rare. Yet, the essential materials for the production of food to feed humanity are attacked as bad for the environment. Abundant food requires oil and chemical fertilizers. Farms do not run on electricity and manure alone.

Abundant food means low prices and low inflation. The price of food rises when the price of oil and fertilizer increase. We should not let the climate alarmists tell farmers how to manage their farms. 🦅
